

MILESTONE 2

Enterprise Learning Platform – Skill & Career Guidance System

Frontend Development & Dashboard Implementation

1. Project Overview

Project Name: Enterprise Learning Platform

Milestone: Milestone 2 – Frontend Development & Feature Implementation

Development Phase: Project Building Phase

SkillSphere Nexus is an enterprise learning and career development platform designed to connect **students, mentors, and administrators** through role-based dashboards and learning management features.

During **Milestone 2**, the primary focus was on developing the **frontend interface, role-based dashboards, navigation system, and interactive features** of the platform.

The three major dashboards implemented during this milestone are:

- **Student Dashboard**
- **Mentor Dashboard**
- **Admin Dashboard**

The frontend was developed with a focus on providing a structured, consistent, and user-friendly experience for each type of platform user.

Note: The features described in this milestone represent the implemented frontend functionality. Backend integration and complete database-driven functionality are outside the scope of this milestone unless specifically mentioned.

3. Student Dashboard

The **Student Dashboard** is designed as the primary workspace for students. It provides access to learning, career development, skill improvement, and professional profile features.

Major Student Dashboard Features Implemented

The student dashboard includes a sidebar containing modules such as:

- Dashboard
- Catalog
- My Courses
- AI Tutor

- Roadmap
- Skill Gap
- Resume
- Practice
- Assignments
- Quizzes
- Certificates
- Careers
- Sessions

The navigation structure allows students to access different learning and career-related functionalities from a single interface.

Functional Progress

During Milestone 2, the student dashboard functionality was developed **up to the Resume module** in the sidebar.

The student profile and related navigation were also implemented, including the **Edit Profile** interface.

The profile section allows students to maintain information that can be used for their learning and career journey.

Student Dashboard Outcome

The student dashboard now provides a structured frontend environment where students can navigate through learning and career-oriented modules from a single platform.

4. Mentor Dashboard

The **Mentor Dashboard** is designed for mentors who create and manage educational content, evaluate students, conduct sessions, and provide career opportunities.

Major Mentor Dashboard Features

The mentor sidebar contains modules including:

- Dashboard
- My Courses
- Lessons
- Grading
- Quizzes
- Sessions
- Internships
- Roster
- Inbox

- Settings

These modules provide mentors with a centralized workspace for managing their teaching activities.

Functional Progress

During Milestone 2, the mentor dashboard functionality was implemented **up to the Grading module**.

The following major areas were developed:

My Courses

The mentor can access and manage courses through the **My Courses** section.

The interface provides course status categories such as:

- All
- Draft
- Pending Review
- Published
- Rejected

The mentor can also access actions such as creating, viewing, duplicating, previewing, publishing, and deleting courses depending on their current status.

Lessons

The Lessons section provides the interface for creating and organizing learning content for courses.

Grading

The Grading section provides the interface for mentors to review and evaluate student work.

The mentor can work with student submissions and access information required for evaluating assignments.

Internship & Hiring Management

The internship module provides mentors with an interface to create internship opportunities.

A mentor can provide information such as:

- Role title
- Company name
- Category
- Work mode

- Location
- Stipend range
- Duration
- Role description

After creating an opportunity, students can view and apply for it, while the mentor can manage applicants through the **Applicant Queue**.

Mentor Dashboard Overview

The dashboard also provides mentors with summary information such as:

- Total Students
- Courses Created
- Pending Assignments
- Pending Quizzes
- Published Courses
- Draft Courses
- Total Enrollments
- Recent Student Activity
- Notifications
- Upcoming Sessions

Mentor Dashboard Outcome

The mentor dashboard provides a centralized frontend workspace for managing courses, lessons, student evaluation, internships, and other mentoring activities.

5. Admin Dashboard

The **Admin Dashboard** is designed for platform-level administration and governance.

The administrator has broader access than students and mentors and is responsible for monitoring users, courses, approvals, internships, reports, and other administrative activities.

Major Admin Dashboard Features

The admin sidebar contains:

- Dashboard
- Users
- Roles
- Approvals
- Internships
- Tickets
- Audits
- CMS

- Settings

Functional Progress

During Milestone 2, the admin dashboard functionality was implemented **up to the Approvals module**.

The admin dashboard provides an overview of important platform metrics, including:

- Total Users
- Students
- Mentors
- Admins
- Total Courses
- Pending Approvals
- Active Courses
- Complaints
- Reports

Dashboard Monitoring

The dashboard allows the administrator to quickly understand the current platform status through summarized statistics.

For example, the admin can view the number of registered users, available courses, active courses, pending approvals, complaints, and reports.

Approvals

The Approvals section is part of the administrative workflow and provides the interface required for reviewing and managing items that require administrator approval.

This supports centralized platform governance and helps ensure that administrative actions are handled from a single workspace.

Admin Dashboard Outcome

The admin dashboard establishes the frontend foundation for centralized platform management, monitoring, and approval-related operations.

6. Common Navigation Bar

A common **top navigation bar** was implemented across the platform to provide a consistent user experience.

The navigation bar includes:

- Platform logo/branding
- Global search
- Theme control
- Notification access
- User profile
- Role information
- Profile/dropdown controls

The search interface allows users to search for relevant platform content such as courses, roadmaps, and mentors.

The notification area provides access to platform-related notifications, while the profile section provides access to user-related options.

This common navigation structure ensures consistency across the Student, Mentor, and Admin interfaces.

7. UI/UX Implementation

During this milestone, emphasis was placed on creating a consistent and professional interface.

The major UI/UX elements implemented include:

- Role-specific sidebar navigation
- Dashboard cards
- Status indicators
- Search interface
- Notification interface
- User profile controls
- Course management layouts
- Tables and management sections
- Consistent spacing and component structure
- Responsive dashboard layout
- Consistent visual theme across different dashboards

The interface was designed to make complex platform functionality easier to navigate and understand.

8. Future Development

The next phase of development can focus on connecting the implemented frontend interfaces with the backend system and database.

The planned areas include:

- Backend API integration
- Database connectivity
- Authentication and authorization integration
- Persistent course and user data
- Student–mentor interactions
- Assignment and quiz data processing
- Internship application processing
- Notification integration
- Complete role-based access control
- Final testing and bug fixing
