

MILESTONE 3

Admin & Mentor Dashboard and Management System

Enterprise Learning Platform – Skill & Career Guidance System

Milestone 3 introduces role-based Admin and Mentor dashboards, building on the authentication and Student Dashboard delivered in Milestones 1 and 2.

Architecture:

Key Features

- Admin Dashboard & Platform Statistics
- Mentor Dashboard & Teaching Statistics
- Role-Based Dashboard Access & Navigation
- User, Role & Course Management
- Course Approval Workflow
- Complaint Management & Audit Logs
- Assignment, Quiz & Session Management
- Internship Management
- Notifications & Broadcast
- Protected, Role-Based REST APIs

2. Project Objective

To provide administrators with centralized platform governance, and mentors with the tools required to manage courses, students, assignments, quizzes and sessions.

Objective

- Admin: platform governance, user/role management, approvals, complaints, audits.
- Mentor: course creation, student monitoring, assignments, quizzes, sessions, grading.
- Dashboard and navigation are determined by the authenticated user's role.

3. Role-Based Access

The platform supports separate experiences based on the authenticated user's role.

Administrator	Mentor
Platform governance	Course creation & management
User management	Student monitoring
Roles and permissions	Assignments
Course approvals	Quizzes
Complaints & audits	Sessions & grading
Internships & notifications	Enrollments & communication

4. Admin Dashboard

Welcome Section: "Welcome, Admin" – highlights platform operations, user governance and real-time monitoring.

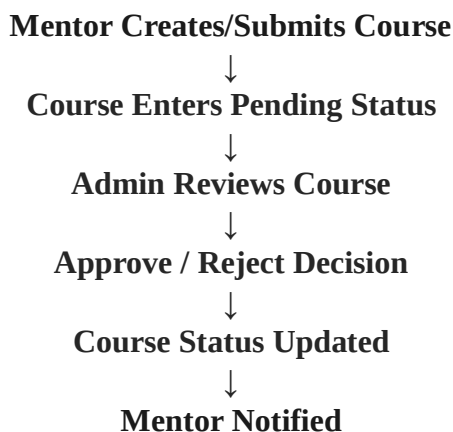

Platform Statistics

Statistic	Description
Total Users / Students / Mentors / Admins	Registered user counts by role
Total Courses	All courses in the system
Pending Approvals	Courses awaiting admin review
Active Courses	Currently active courses
Complaints	Complaints needing attention

All statistics are retrieved dynamically from the backend. The Admin sidebar provides: Dashboard, Users, Roles, Approvals, Internships, Complaints Desk, Audits, Settings — restricted to authorized administrators.

5. Course Approval Workflow

Administrators manage user and role assignments (Student, Mentor, Admin), with role changes tracked for audit purposes. Course submissions follow a controlled approval workflow:

Course states: Draft → Pending Approval → Approved/Published → Rejected → Archived.

Administrators also manage Complaints (Open → In Review → Resolved → Closed) and Audit Logs, which record user actions, role changes, approvals and system events for traceability.

6. Mentor Dashboard

Welcome Section: "Welcome, Mentor" – highlights guiding students, managing courses and delivering mentorship.

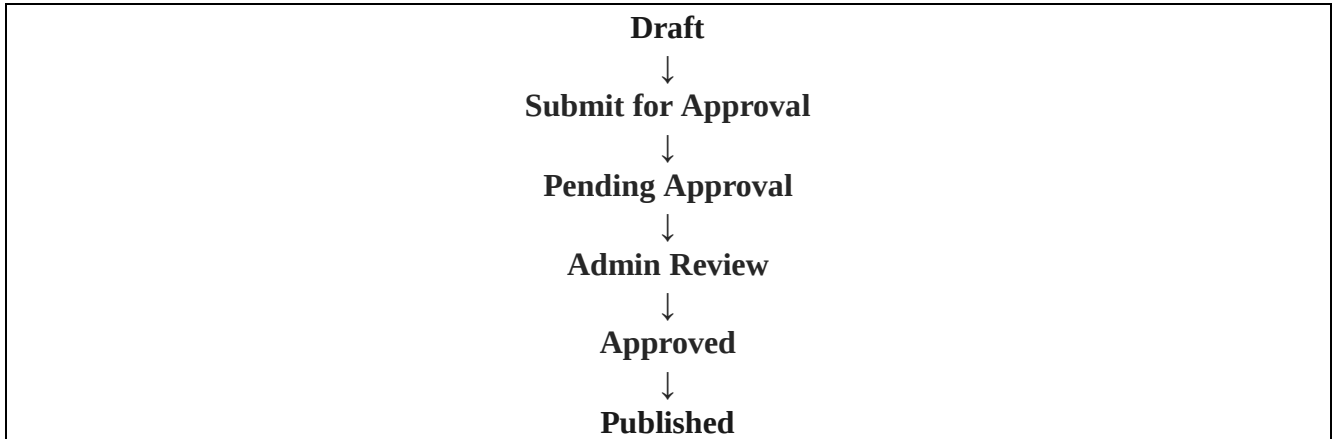

Teaching Statistics

Statistic	Description
Total Students / Total Enrollments	Students across the mentor's courses
Courses Created / Published / Draft	Course counts by status
Pending Assignments	Assignments requiring attention
Pending Quizzes	Quizzes requiring review

The Mentor sidebar provides: Dashboard, My Courses, Lessons, Grading, Quizzes, Sessions, Internships, Roster, Inbox, Notifications & Broadcast, Settings.

7. Teaching & Course Management

Course Lifecycle:

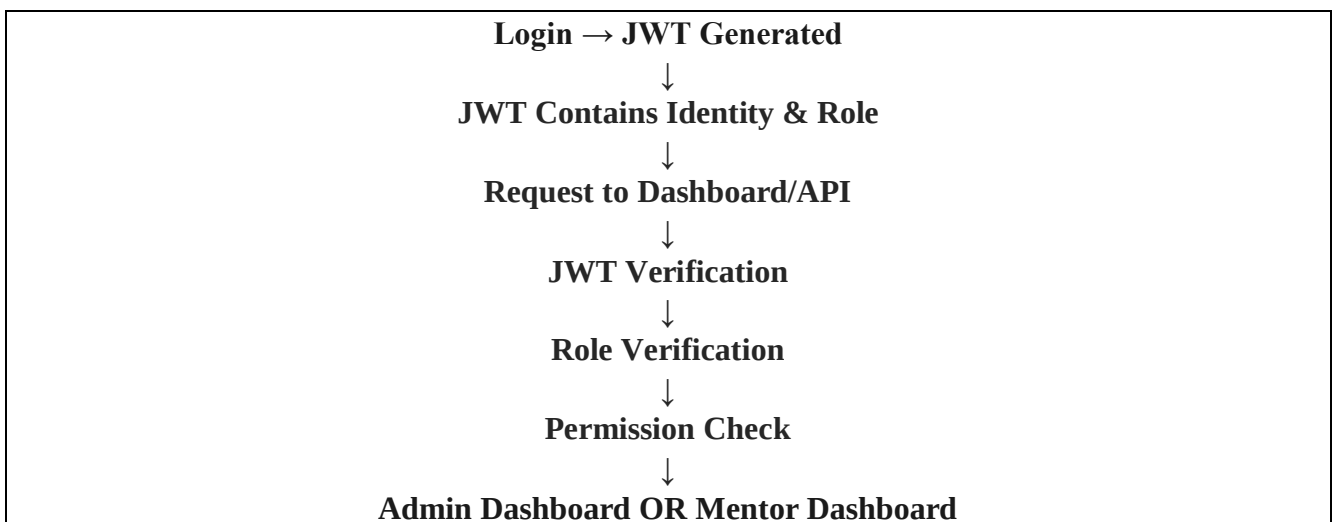

Mentors also manage:

- Assignments – create, edit, grade and give feedback on submissions
- Quizzes – create, edit, manage questions and review results
- Sessions – schedule and track live mentorship sessions
- Student Activity – a feed of enrollments, submissions and progress

8. JWT & Role-Based Authorization

Milestone 3 builds on the JWT authentication established in Milestone 1.

Unauthorized access is rejected — e.g. a Student cannot access Admin or Mentor APIs, and a Mentor cannot access Admin governance APIs.

9. Protected APIs

Admin APIs	Mentor APIs
User & role management	Course management
Course approvals	Student roster
Complaint management	Assignments & quizzes
Audit logs	Grading & sessions
Internship management	Enrollments
Platform statistics & notifications	Mentor notifications

Every protected API validates both authentication and authorization before granting access.

10. Notifications, Broadcast & Internships

Admin notifications:

system alerts, approval requests, complaints, user activity and platform events.

Mentor notifications:

student enrollments, assignment submissions, quiz activity, course updates and session reminders. Mentors can also broadcast announcements to their students.

Internship Management (Admin):

internship listings, approvals, status tracking, organization information and application monitoring.

11. UI/UX & Responsive Design

The Admin and Mentor dashboards maintain the platform's design language established in earlier milestones.

Design Characteristics

- Clean, modern interface with a green/mint visual theme
- Rounded cards, soft shadows and consistent iconography
- Clear typography and accessible controls
- Role-specific navigation and clear statistics

Supports:

Desktop | Laptop | Tablet | Mobile, preventing content overlap, broken cards, text cutoff and horizontal scrolling.

12. Final Outcome

Milestone 3 delivers dedicated Admin and Mentor dashboards with role-based access control, platform management, course administration, student monitoring, teaching tools, assignments, quizzes, sessions, notifications, approvals, complaints and audit capabilities.

This establishes the operational layer required to manage and scale the platform, while maintaining secure separation between Student, Mentor and Admin functionality:
